the "SYSTEM"

DOWEL MOBILE DISPLAY KIT

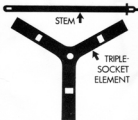

kit consists of:

- (1) PLASTIC TRIPLE-SOCKET
- (3) WOOD RODS
- (3) PLASTIC TIPS FOR RODS
- (1) PLASTIC HANGING HOOK WITH CORD

ASSEMBLY INSTRUCTIONS

1

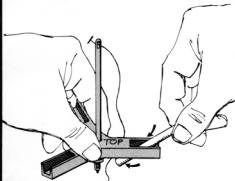

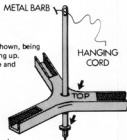

SEPARATE PARTS OF PLASTIC "SYSTEM" KIT AND DISCARD EXCESS PLASTIC

2

Assemble triple-socket and stem as shown, being sure TOP side of triple-socket is facing up. Rest bottom of stem on hard surface and press down firmly on triple-socket until it stops against flange at bottom of stem.

Unwind cord from plastic hook. Tie one end of cord to slotted hole at bottom of hanging hook. Then insert barb at other end of cord through hole in top of stem.

3

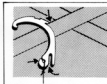

Fit plastic tips on one end of each wood rod. Holding wood rod close to end (without plastic tip), insert into channel of socket at slight downward angle until it protrudes at bottom. Then straighten and slide rod towards center of socket as far as it will go. Keeping a firm grip on the partial assembly, attach remaining wood rods in same manner. Be sure all rods are completely inserted.

BANNERS NOT INCLUDED

4

Slide banners over wood rods as illustrated. Then lift display carefully to hanging position.

The plastic hook is specially designed to hang securely onto channel strip of lay-in ceiling, light fixtures, over wire and other available overhead conditions. Tie hanging cord tightly to hole in bottom of hook. Long vertical slot at bottom fits into rigid tube or other lifting device for convenient installation.
